Documentation of John Doe HTML Template

Table of Content

1. <u>Introduction</u>

First of all I would like to thank you for purchasing this template. This documentation will guide you through with all the tweaks and steps of customizing the template according to your needs.

Before you start editing the template you must have a text editor I would suggest Notepad++ Because it has a beginner friendly interface. You can download this from this given URL https://notepad-plus-plus.org/downloads/v7.8.5/ . Go ahead and install it.

I would like to show you the folder structure This might help you.
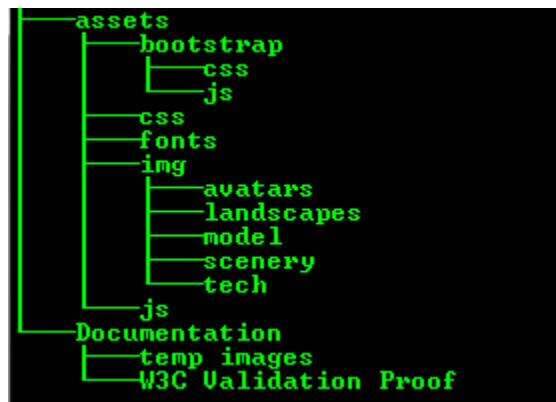

Folder Structure

Also as an extra note use (CTRL+F) to find a piece of text. So without further ado let's get started.

Open up the index.html file in the text editor before editing the template. First of all let's change the Title of the webpage. Replace this (<!-- HTML Page Title -->) With your page title.

2. NavBar (Navigation Bar)

a. Changing the Navbar Brand Name/Logo

Before doing this first you should decide what type of logo you are going to have

- Text Logo (Ex:- Current Logo on the template)
- Image Logo

- Text Logo

Replace the commented piece of code "Your Brand Logo Here" by typing your text brand.

```
33
34              <!-- Brandlogo Area    -->
35              <a class="navbar-brand logo" href="#"><!-- Your Brand Logo Here --></a>
36              <!-- Brandlogo Area Ends Here -->
37
```

Before

```
35              <!-- Brandlogo Area    -->
36              <a class="navbar-brand logo" href="#">John Doe logo</a>
37              <!-- Brandlogo Area Ends Here -->
38
```

After

- <u>Image Logo</u>

If you are having an image logo, Save your logo to the path "assets/img/logo/<your logo here>" and rename your logo filename to logo.

Now go to your remove the comment "Your Brand Logo Here" and place this code (Note if your logo is a .jpg change the extension to jpg by removing .png)

```
<img class="img-fluid logo" src="assets/img/logo/dummylogo.png">
```

```
35          <!-- Brandlogo Area   -->
36          <a class="navbar-brand logo" href="#"><img class="img-fluid logo" src="assets/img/logo/dummylogo.png"></a>
37          <!-- Brandlogo Area Ends Here -->
```

You can change the width and the height of your logo by going to the file on "assets/css/useredits.css" and changing the width and the height values. But first removing the comments.

```
2    /*Change Logo width and the height*/
3    /* .logo{
4        width: 80px;
5        height: 80px;
6    } */
```

```
2    /*Change Logo width and the height*/
3    .logo{
4        width: 80px;
5        height: 80px;
6    }
```

Before   After

B. <u>Changing the Navbar Background-Color</u>

To change the background color you must edit the hex color values of the file "assets/css/useredit.css" where there is a comment saying "Change Background Color of Navbar". Grab the hex color code from google picker. (link: https://www.google.com/search?q=color%20picker)

```
 8
 9    /*Change Background of the Navbar*/
10    .navbackground{
11        background-color: #000; /* Paste the Hex Code */
12    }
```

3. <u>Home Section</u>

A. <u>Adding Your Name</u>

To change your name find the comment that says "Your Name Here".

```
61
62        <!-- Your Name Area -->
63        <h2 style="font-family: Almendra, serif;">Hello There I am <!--Your Name Here--><br></h2>
64        <!-- Your Name Area End-->
65
```

Before

```
62        <!-- Your Name Area -->
63        <h2 style="font-family: Almendra, serif;">Hello There I am John Doe<br></h2>
64        <!-- Your Name Area End-->
```

After

B. Automated Typewriter

Replace the comments "<!-- Word 1 -->", "<!-- Word 2 -->", "<!-- Word 3 --->" with the words you pleased.

```
66            <!-- Automated TypeWriter Area -->
67            <div class="caption v-middle text-center">
68                <h1 class="cd-headline clip">
69                    <span class="blc">I'm | </span>
70                    <span class="cd-words-wrapper">
71                        <b class="is-visible"><!-- Word 1 --></b>
72                        <b><!-- Word 2 --></b>
73                        <b><!-- Word 3 --></b>
74                    </span>
75                </h1>
76            </div>
77            <!-- Automated TypeWriter Area -->
78
```

Before

```
66            <!-- Automated TypeWriter Area -->
67            <div class="caption v-middle text-center">
68                <h1 class="cd-headline clip">
69                    <span class="blc">I'm | </span>
70                    <span class="cd-words-wrapper">
71                        <b class="is-visible">Designer.</b>
72                        <b>Model.</b>
73                        <b>Creative.</b>
74                    </span>
75                </h1>
76            </div>
77            <!-- Automated TypeWriter Area -->
78
```
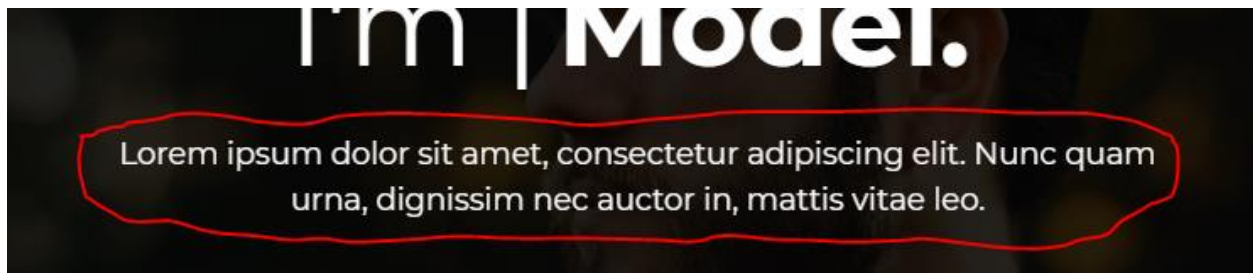

After

C. Changing the Description

To change the description go to the comment "Your Home Description Goes Here" and replace it with your desired description. If you want you could keep the home description empty.

Before

After

D. Change The Background Image

Before you change the background Image you must have your own background image. I would recommend an image with 1920x1080

resolution. (You could find a quality background from unsplash.com, pexels.com or you can use a background you prefer).

Now go to useredits.css (assets/css/useredits.css) and look for a comment called "Location to your background" previous to that you will find the url() keyword with the path of the existing background image.

Now simply add your background file path replacing the existing file path.

```
15    /*Change Background of the Home Section*/
16    .homebackground{
17        z-index: 1;
18        background-image: url(/assets/img/homebackground.jpg);    /*Location to your background*/
19        color: □rgba(0, 0, 0, 0.85);                    /*Background Color*/
20    }
21
```

Also you can change the color of the background by tweaking the RGB color values. (Here is a RGB Color viewer: htmlcolors.com/rgba-color).

4. About Me Section

A. Subheading Alteration
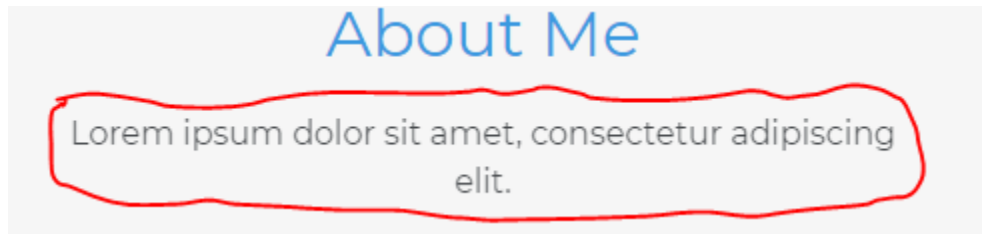

There is a comment in the about description area comment: " <!--Enter Your About Section Description Here --> ". Simply remove this comment and add your desired description.

Before

After

B. <u>Changing the Picture</u>

Have an image selected and replace it with the original image available at file path (assets/img/aboutme.jpg). That should do the job for jpg images. But in case if you use a PNG Image then open index.html in the text editor and change the end of the path from .jpg to .png .

```
110        <!-- About Image Area -->
111        <div class="col-md-6" data-aos="flip-left">
112            <img class="img-thumbnail"src="assets/img/aboutme.jpg" alt="Thats Me">
113        </div>
114        <!-- About Image Area End -->
115
```

C. Describing Yourself

So Who Am I ?

I am John Doe also known as lipsom. I am a Ghaphic Designer and a Modeler . During my spare time I like to hang out with my friends and also explore more about myself.

Say Hello
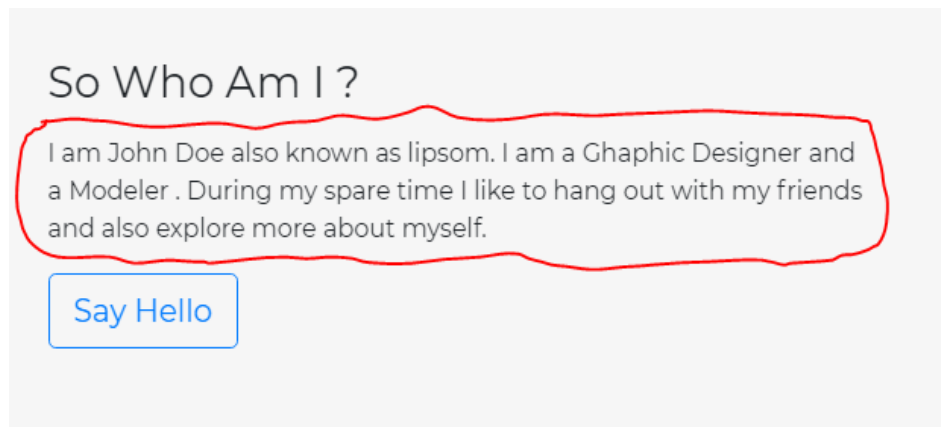

Similar to previous steps there is a comment displaying " <!-- Describe yourself here --> " . Replace this comment by describing yourself.

```
117        <h3>So Who Am I ?</h3>
118        <div class="getting-started-info">
119
120            <!-- About Section Description Area -->
121
122            <p><!--Describe yourself here--></p>
123
124            <!-- About Section Description Area -->
125
126        </div>
127
```

5. News Section

B. Changing the Heading Title and News Description

The same concept applies when changing the heading and descriptions as we discussed earlier by simply replacing the comment.

```
144        <div class="block-heading">
145
146            <!-- News Title Area  -->
147
148            <h2 class="text-center newsheading">Latest And Upcoming News</h2> <!-- <<- News Title Goes here -->
149
150            <!-- News Title Area end  -->
151
152            <!-- News Description Area  -->
153
154            <p class="text-center" style="color: ■#fff;margin-bottom: 3rem;"><!-- News Description Goes Here --></p>
155
156            <!-- News Description Area  -->
157            |
158        </div>
```

B. Altering the Date And Month of the cards, Card title, Card Description

Now you have arrived at dealing with cards. There are a total of 3 cards. But they are all displayed in the code in the below given template. Simply fill in your card details in all of the 3 Cards available on this template.

```html
160                        <div class="date">
161                            <!-- date 1 Area -->
162                            <span class="day"> <!-- Date --> </span>
163                            <!-- date 1 Area End -->
164
165                            <!-- Month 1 Area -->
166                            <span class="month"> <!-- Month --> </span>
167                            <!-- Month 1 Area End -->
168                        </div>
169
170                        <!-- Card 1 title area -->
171                        <h3><!-- Title --></h3>
172                        <!-- Card 1 Title Area End -->
173
174                        <!-- Card 1 Description area -->
175                        <p><!-- Card Description --></p>
176                        <!-- Card 1 Description area End -->
177                    </figcaption>
178                </figure>
179                <a href="#"></a>
180            </div>
181            <!-- Card 1 End   -->
```

C. Card image

There are 3 card images. Each card has an image area and there you will find the relevant image tag to link your image.

```html
159                        <div class="image">
160                            <!-- Card Image Area -->
161                            <img src="Your Image for card 1" alt="pr-sample23" />
162                            <!-- Card Image Area End -->
163                        </div>
```

You must place your path to the image in the highlighted portion of the above screenshot. For Example (I recommend 600x600 resolution images) and of course you can change the alt value too. ([What is alt in html ?](#))

```
159        <div class="image">
160            <!-- Card Image Area -->
161            <img src="https://source.unsplash.com/dS-q7-zkD9c/600x600" alt="pr-sample23" />
162            <!-- Card Image Area End -->
163        </div>
164
```

(Optional Fact) :- If you feel like you don't have good quality backgrounds I recommend using images from unsplash.com. It's really easy to integrate the image link.

A Quick tutorial on how to get a 600x600 resolution image from unsplash:
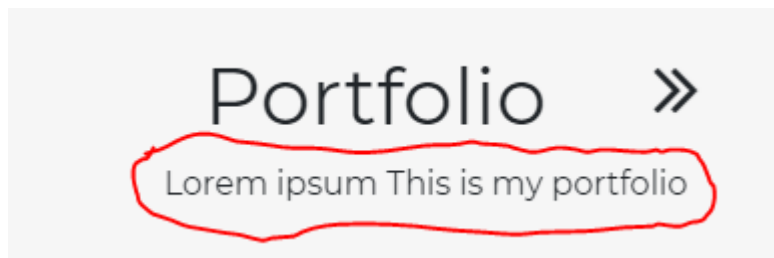

- Visit usplash.com and pick up an image.
- Get it's photo-id ex:
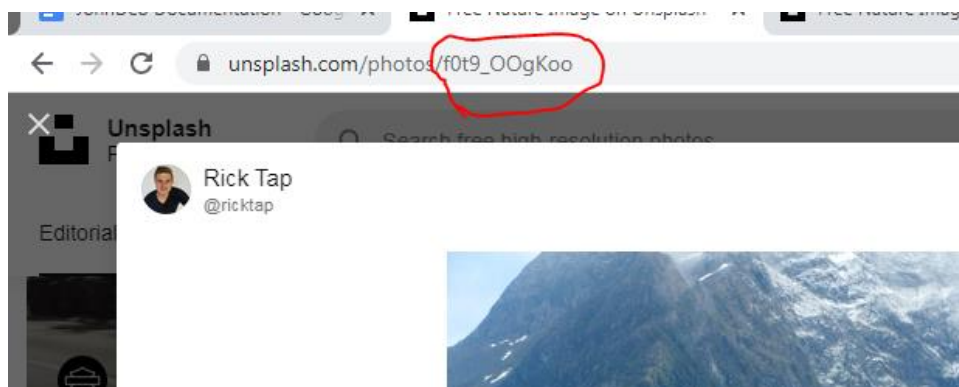

- Use this url template to get a 600x600 resolution image, https://source.unsplash.com/photo-id/600x600

- Example : https://source.unsplash.com/f0t9_OOgKoo/600x600
- Now paste this link on your code.

6. Portfolio Section

A. Changing the sub heading

Portfolio »

Lorem ipsum This is my portfolio

Targeted Sub Heading

You must replace the "`<!-- Portfolio Description Goes Here -->`" Comment by your Desired Portfolio Description.
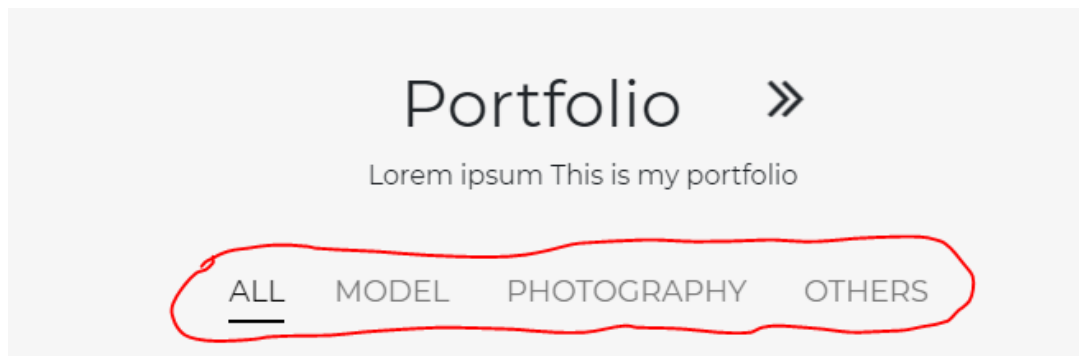

```
302
303        <!-- Portfolio Description Area -->
304        <p class="text-center"><!-- Portfolio Description Goes Here --></p>
305        <!-- Portfolio Description Area Ends -->
306
```

B. Altering the Tabs

Portfolio »

Lorem ipsum This is my portfolio

ALL   MODEL   PHOTOGRAPHY   OTHERS

Targeted Tabs

There are 4 Tabs in the portfolio section.

```
309
310                    <!-- Portfolio Tabs Area -->
311
312                    <span class="active" data-filter="all">All</span>
313                    <span data-filter="1"><!-- Tab 1 Name --> </span>
314                    <span data-filter="2"><!-- Tab 2 Name --></span>
315                    <span data-filter="3"><!-- Tab 3 Name --></span>
316
317                    <!-- Portfolio Tabs Area End -->
318
```

You can add your tab name replacing the " <!-- Tab tabno Name --> "
comments. But make sure NOT to do changers to the data-filter value
available previously to the comment. You can also remove a tab by
deleting the entire line (Starting from).

C. Adding Images to the portfolio.

By default all images are present in the "All" Tab. There are a total of
8 images in the portfolio. If you prefer you can remove images
according to your needs.

You can replace the original image with your current image by replacing the path in the src attribute as we discussed earlier in the card images topic and also make sure to replace the path in the href attribute to path of your image (To get the lightbox effect).

```
350        <!-- Image 4 Area-->
351        <div class="col-sm-6 col-md-4 col-lg-3 filtr-item" data-category="2">
352            <a href="https://source.unsplash.com/HWwF4OnXAdM/1200x900.jpg">
353                <img class="img-fluid" src="https://source.unsplash.com/HWwF4OnXAdM/600x600.jpg"
                       alt="Gallery" /></a>
354        </div>
355        <!-- Image 4 Area End-->
```

Next comes the data-category attribute available in the image section. This is the attribute that provides a category to your image. Examples :

data-category="2" means the image will show up on tab 2
data-category="2,3" The image will show up on tab 2 and tab 3

Now There's one thing that is setting up the image description. The first image in the portfolio section already has an image description inserted for your simplicity in creating image descriptions for other images. Use the below given code as a template to insert an image description.

If you prefer to don't have an image description on you images ignore adding the below given code and remove the images description in the 1st portfolio image.
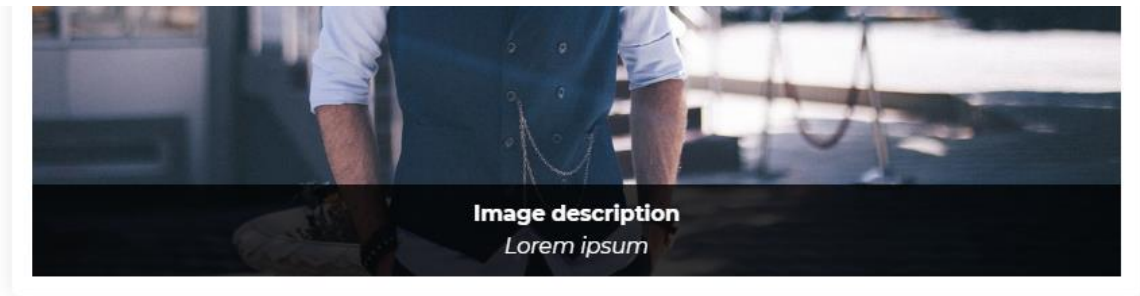

Targeted Element

```
data-caption = "Image description &lt;br&gt; Your Image Description
goes here "
```

Example

Congratulations you have set up your Portfolio Section successfully.

7. My Skills Section

A. Changing the Description of the skills section

In the Skill Section Description Area you will find a comment <!-- Your Description goes here --> . Replace this comment with your skill Section title.

B. Adding your skill sets

You will find the skill title that you want to enter inside the <!--Skill <skillno> title Area--> . There are some skills entered as sample/dummy text to help you find the right location.

```
434                                        <!-- Skill 2 title Area -->
435                                        <h3 class="skillheading">Photography</h3>
436                                        <!-- Skill 2 title Area End -->
437
```

C. Progress Bars

In each skill area you will find the progress bars. Once again there are sample text percentages indicated. Replace each of them.

For example, say you want to make the progress bar reach 85% on your skill 1. You need to type 85 the below given locations.

```
419
420                              <!-- Skill 1 Progress bar area -->
421                              <div class="progress-bar progress-bar-striped bg-info
                                 progress-bar-animated" role="progressbar" style="width: 85%;"
                                 aria-valuenow="85" aria-valuemin="0" aria-valuemax="100">85%</div>
422                              <!-- Skill 1 Progress bar area End -->
423
```

8. Review Section

A. Editing the Review Section

All the required instructions are mentioned in through comments. Find these comments and replace them with the review user details.

```html
534        <!-- User 1 Profile -->
535        <div class="carousel-item active">
536            <div class="testimonial_095_slide">
537
538
539                <!-- User 1 Image Area -->
540                <img class="profilepic" src="https://randomuser.me/api/portraits/men/35.jpg" alt="profilepic">
541                <!-- User 1 Image Area End -->
542
543                <!-- User 1 Review Area -->
544                <p>Lorem ipsum dolor sit amet adipiscing elit am nibh unc varius facilisis eros ed erat in in velit quis
                   arcu ornare laoreet urabitur.</p>
545                <!-- User 1 Review Area End -->
546
547                <!-- User 1 Name Area -->
548                <h5><a href="#">Eddy</a></h5>
549                <!-- User 1 Name Area End -->
550
551            </div>
552        </div>
553        <!-- User 1 Profile End -->
554
555
```

All the comments in the review section you need

You can get rid of a review user profile by deleting the code starting from the comment " <!-- User userno profile --> " to " <!-- User userno profile End--> ".

B. Changing the background color of the review slider

If you go to useredits.css (File location: assets/css/useredits.css). There you will see a comment saying "Change The Review Section Background Color". Change the background color by specifying your

color code (Find a color picker:-
https://www.google.com/search?q=color%20picker).

Please DO NOT change !important keyword next to the color code.

```
23    /*Change The Review Section Background Color*/
24  ∨ .reviewsection{
25        background-color: ▧#1E6ADD !important;    /*Enter color hex code. PLEASE DO NOT REMOVE THE " !important " keyword*/
26    }
27
```

9. Contact Form

## A. Changing The Receiver email address (Your Email)

To change the Email open the file named contact.php . Inside the file you will see a comment showing the where you want to insert your email so the emails from your website visitors will come directly to that particular email address you provided.

Note: You must enter your email within the quotes.

Example :

```
3
4    $to = "example@email.com";       /* <--- Enter your Email Address */
5
```

10. Footer
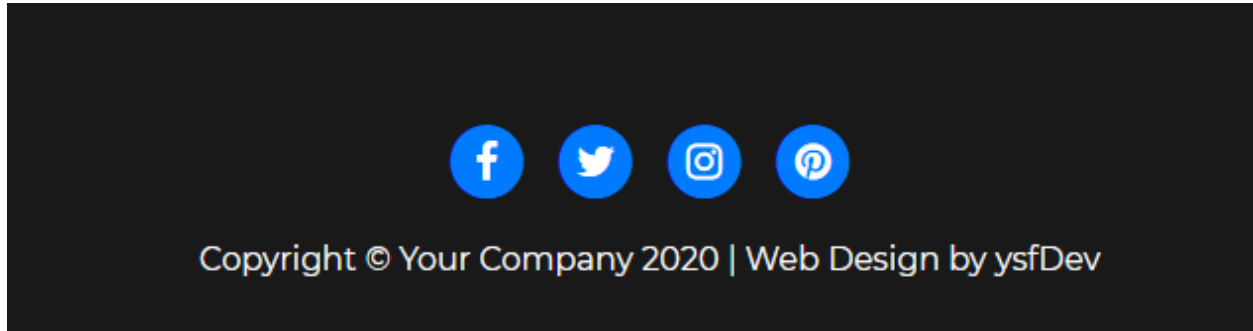

Targeted Footer

A. Adding Social Media Links

```
655                        <!-- Facebook logo Area -->
656                        <li class="list-inline-item">
657
658                            <!-- Facebook link -->
659                            <a href="#" target="_blank">
660                            <!-- Fackbook Link End -->
661
662                                <span class="fa-stack fa-lg">
663                                    <i class="fa fa-circle fa-stack-2x"></i>
664                                    <i class="fa fa-facebook fa-stack-1x fa-inverse"></i>
665                                </span>
666                            </a>
667                        </li>
668                        <!-- Facebook logo Area End -->
```
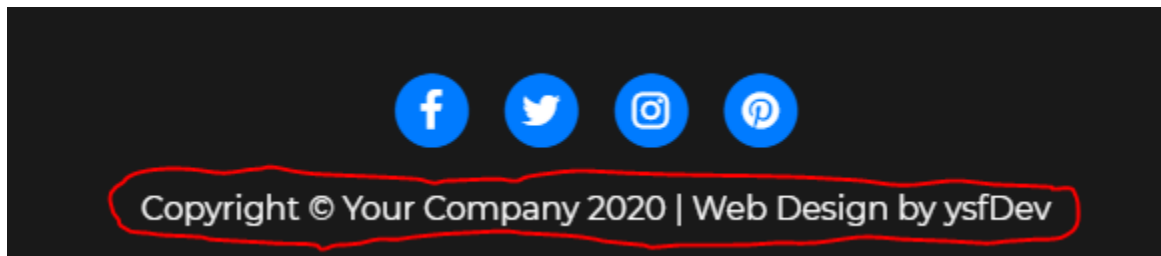

You can add your social media profile link by replacing the " # ". You can remove a social media logo from the website by simply removing the logo area.

For example if you want to remove the facebook logo you must delete the comment starting from "Facebook logo Area" to comment "Facebook logo Area End".

B. <u>Copyright text</u>

Copyright

The only thing you need to do is to change your Name/Business Name. Replacing "Your Company" and adding the current year.

```
718    <!-- Copyright -->
719
720    <p class="copyright text-muted text-center">Copyright &copy; Your Company 2020</p>
721
722    <!-- Copyright End -->
723
```

11. <u>Meta Tags</u>

At last I want to talk about Meta tags. They are really important. The most important once are the

- `<meta name="keywords" content="">`
- `<meta name="description" content=" ">`

<u>Meta keywords</u> are important to rank of search engines like Google, Yahoo etc. So add some keywords matching to your website. Ex: A website of a photographer can add key words like ("photography, image, photographer artist, photographer bio, photographer portfolio") etc.

<u>Meta Description</u> is the website description that the visitors can see about your website.

Add the required information to your meta tags displayed on the code.

Meta Tags

<u>Conclusion</u>

If you have any questions or doubts please free to contact me.
